

METHOD, SYSTEM, AND PROGRAM FOR  
CHECKING CONTACT INFORMATION

ABSTRACT

5      Provided is a computer implemented method, system, and program for checking  
text in an electronic document. Words in the text are scanned and parsed. For each set of  
one or more scanned and parsed words, a determination is made of whether one or more  
words form a contact phrase providing information to identify or address a person or  
entity. After one contact phrase is scanned, contact information is accessed including  
contact phrases. The contact information is searched to determine if the scanned contact  
10    phrase matches contact phrases in the searched contact information.
